## Supplementary materials

Figure S1. EX527, a selective SIRT1 inhibitor, partly eliminated the effects of maslinic acid. Cardiac performance-related parameters including LVEDD (A), LVESD (B), LVEF (C), and LVFS (D) were determined using echocardiography. The data were expressed as means $\pm \mathrm{SD} . \mathrm{N}=8$ for each group. ${ }^{*} P<0.05,^{* *} P<0.01$, and ${ }^{* * *} P<$ 0.001 indicate significant difference.

Figure S2. EX527, a selective SIRT1 inhibitor, partly eliminated the effects of maslinic acid. Left ventricle hemodynamic parameters including LVSP (A), LVEDP (B), $+\mathrm{dp} / \mathrm{dt}(\mathrm{C})$, and $-\mathrm{dp} / \mathrm{dt}(\mathrm{D})$ from left ventricle were determined using hemodynamic measurement. The data were expressed as means $\pm$ SD. $\mathrm{N}=8$ for each group. ${ }^{*} P<$ 0.05 , ** $P<0.01$, and ${ }^{* * *} P<0.001$ indicate significant difference.

Figure S3. Treatment of maslinic acid $(20 \mathrm{mg} / \mathrm{kg})$ attenuated infract size in the rat model of ischemia-reperfusion injury. The representative images of TTC staining. (B) the TTC statistics graph was displayed. The data were expressed as means $\pm$ SD. $N=8$ for each group. ${ }^{*} P<0.05$ and ${ }^{* * *} P<0.001$ indicate significant difference.
