SUPPLEMENTAL MATERIAL

3

Long-Term Survival with High Dose Interleukin-2 Therapy

1 **Table S1 - Guide to HD IL-2 Treatment Management**2 **1. Patient Selection**

- 3 • Physiologic patient selection is critical to safe administration and ability to tolerate the
- 4 capillary leak syndrome produced by HD IL-2 administration
- 5 • Eligibility includes no or treated ischemic cardiac disease, reasonably normal pulmonary
- 6 function and reasonably normal renal and hepatic function
- 7 • Patients with treated, asymptomatic brain metastases have safely received HD IL-2
- 8 (personal communication, investigators)
- 9 • Patients into their 70's have been successfully treated, having passed this physiologic
- 10 screen

11 **2. HD IL-2 Treatment Course (2 one week cycles separated by one week)**

- 12 • T-cell growth factor (IL-2) activates T-cells, with many downstream effects
- 13 • Toxicity is predictable day by day of treatment cycle
- 14 • Common acute side effects are hypotension, capillary leak, malaise, diarrhea, oliguria,
- 15 alterations in laboratory values which continue with continued treatment
- 16 • Acute toxicities subside/reverse when IL-2 dose is held, or treatment is stopped

17 **3. HD IL-2 Treatment Centers**

- 18 • Physicians and nurses experienced in management of cytokine-related toxicities
- 19 • Provision of monitored setting
- 20 • Some centers utilize:
 - 21 – Step down unit
 - 22 – Stem cell transplant unit – provides nursing intensity
 - 23 – Standard oncology unit, with monitoring capability
 - 24 – Will be same level of care as Car-T cell therapy

Long-Term Survival with High Dose Interleukin-2 Therapy

1 **Table S2: Ongoing and Completed Trials of IL-2 and Anti-PD-1 Checkpoint Inhibitors**

2

Metastatic Renal Cell Cancer		
NCT02964078	4 Blocks of 9 wks each: Pembro wk 1,4,7 HD IL-2, 5 doses over 33 hrs, wks 2,3, 5,6 starting second 9 wk block	Ref 24
NCT02989714	Wk 1, HD IL-2, cycle 1 Wk 2, Nivo Wk 3, HD IL-2, cycle 2 Wk 4 and every 2 wks, Nivo	
NCT03260504	Pembro, wk 1 and every 3 weeks; IL-2 – Cohort 1, SQ low dose wks 1-6; IL-2 – Cohort 2, low dose IV, wks 1 and 4 IL-2 – Cohort 3, HD IL-2, IV wks 1 and 4	
Metastatic Melanoma		
NCT02748564	Pembro, wk 0 and every 3 wks; IL-2 – Cohort 1, LD IV, wk 3 and 5 IL-2 – Cohort 2, Int Dose IV, wk 3 and 5 IL-2 - Cohort 3, HD IL-2 IV, wk 3 and 5	
NCT04165967	Adoptive TIL + Nivo + IL-2 in advanced melanoma	Swiss CT.Gov listing also
Metastatic Melanoma and Metastatic Renal Cell		
NCT03991130	Nivo day 1 and 35 Day 8-12 HD IL-2 cycle 1 Day 22-26 HD IL-2 cycle 2	

3 Anti-PD-1 – anti-programmed death-1; wk – week; Pembro - Pembrolizumab; HD IL-2 – high
4 dose interleukin-2; Nivo – nivolumab; D – day; LD – low dose; SQ – subcutaneous; IV –
5 intravenous; Int – intermediate; TIL – tumor infiltrating lymphocytes

6

Long-Term Survival with High Dose Interleukin-2 Therapy

1

TABLE S3 – PATIENT DEMOGRAPHICS

2

Characteristics

Metastatic Melanoma

Metastatic Renal Cell

3

(n=54)

(n=46)

Sex: Male/Female	31/23	36/10
Age: Median/range	53 years (25-76)	54 years (39-73)
Sites of Metastases:		
Lymph nodes	40%	20%
Lung	25%	50%
Liver	17%	4%
Bone	15%	11%
Other – CNS, pancreas, adrenal, spleen, soft tissue, GI tract	10% or less	10% or less

4 CNS – central nervous system, GI - gastrointestinal
