Critical Illness in Patients with Metastatic Cancer: a Population-Based Cohort Study of Epidemiology and Outcomes

Lavi Oud, MD

Supplementary File

STROBE Statement—Checklist of items that should be included in reports of *cohort studies*

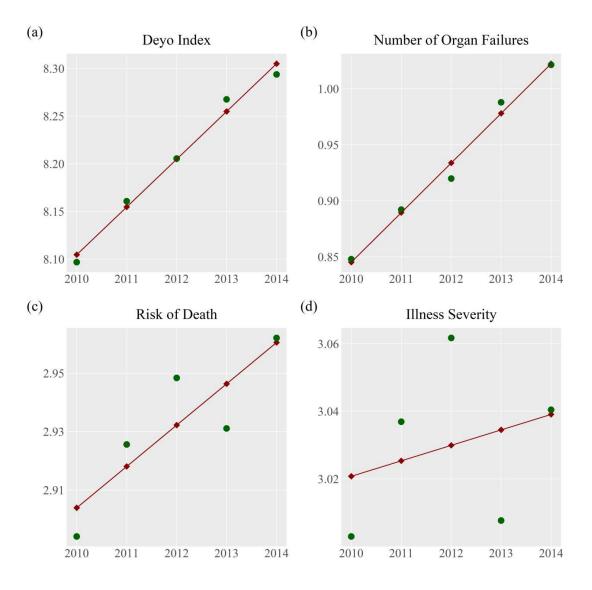

| | Item No | Recommendation | Page No |
|------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Title and abstract | 1 | (a) Indicate the study's design with a commonly used term in the title or the abstract | 1, 2 |
| | | (b) Provide in the abstract an informative and balanced summary of what was done and what was found | |
| Introduction | | | • |
| Background/rationale | 2 | Explain the scientific background and rationale for the investigation being reported | 4-5 |
| Objectives | 3 | State specific objectives, including any prespecified hypotheses | 5 |
| Methods | | | |
| Study design | 4 | Present key elements of study design early in the paper | 5 |
| Setting | 5 | Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection | 5, 6 |
| Participants | 6 | (a) Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up | 5, 6 |
| | | (b) For matched studies, give matching criteria and number of exposed and unexposed | |
| Variables | 7 | Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable | 6, 7 |
| Data sources/ measurement | 8 | For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group | 6, 7 |
| Bias | 9 | Describe any efforts to address potential sources of bias | 8, 9 |
| Study size | 10 | Explain how the study size was arrived at | NA |

| Quantitative variables | 11 | Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why | 6-9 |
|------------------------|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Statistical methods | 12 | (a) Describe all statistical methods, including those used to control for confounding | 7-9 |
| | | (b) Describe any methods used to examine subgroups and interactions | |
| | | (c) Explain how missing data were addressed | |
| | | (d) If applicable, explain how loss to follow-up was addressed | |
| | | (\underline{e}) Describe any sensitivity analyses | |
| Results | | | |
| Participants | 13 | (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed | 10 |
| | | (b) Give reasons for non-participation at each stage | |
| | | (c) Consider use of a flow diagram | |
| Descriptive data | 14 | (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders | 10 |
| | | (b) Indicate number of participants with missing data for each variable of interest | |
| | | (c) Summarise follow-up time (eg, average and total amount) | |
| Outcome data | 15 | Report numbers of outcome events or summary measures over time | 10, 11 |

| precision (eg, 95% confidence interval). Make clear which confounders were adjusted and why they were included (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period Other analyses 17 Report other analyses done—eg analyses of subgroups and interactions, and sensitivi analyses Discussion Key results 18 Summarise key results with reference to study objectives Limitations 19 Discuss limitations of the study, taking into account sources of potential bias or | their 10- |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period Other analyses 17 Report other analyses done—eg analyses of subgroups and interactions, and sensitivi analyses Discussion Key results 18 Summarise key results with reference to study objectives | for 12 |
| (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period Other analyses 17 Report other analyses done—eg analyses of subgroups and interactions, and sensitivi analyses Discussion Key results 18 Summarise key results with reference to study objectives | |
| meaningful time period Other analyses 17 Report other analyses done—eg analyses of subgroups and interactions, and sensitivi analyses Discussion Key results 18 Summarise key results with reference to study objectives | |
| Discussion Key results 18 Summarise key results with reference to study objectives | |
| Key results 18 Summarise key results with reference to study objectives | ty 10- 12 |
| | |
| Limitations 19 Discuss limitations of the study taking into account sources of potential bias or | 13 |
| 25 Discuss initiations of the study, taking into account sources of potential bias of | 17 |
| imprecision. Discuss both direction and magnitude of any potential bias | |
| Interpretation 20 Give a cautious overall interpretation of results considering objectives, limitations, | 13- |
| multiplicity of analyses, results from similar studies, and other relevant evidence | 16 |
| Generalisability 21 Discuss the generalisability (external validity) of the study results | 13- |
| | 16 |
| Other information | <u>'</u> |
| Funding 22 Give the source of funding and the role of the funders for the present study and, if | NA |
| applicable, for the original study on which the present article is based | |

eFigure 1. Plots of predicted vs observed values over time for the Deyo comorbidity index, number of organ failures, APR-DRG risk of death, and APR-DRG illness severity in critically ill patients with metastatic cancer

Panel a: Deyo comorbidity index; panel b: number of organ failures; panel c: APR-DRG risk of death; panel d: APR-DRG illness severity. The maroon-colored markers and lines represent predicted mean values for each response variable on a given year and the regression line, respectively. The green round markers represent the corresponding observed mean values for each response variable on a given year. APR-DRG: All Patients Refined Diagnosis Related Groups

eTable 1. Linear regression of the annual changes of the Deyo comorbidity

index, and the number of organ failures

| Variable | coefficient (95% CI) | р |
|--------------------------|---------------------------|---------|
| Deyo comorbidity index | +0.050 (+0.041 to +0.058) | <0.0001 |
| Number of organ failures | +0.044 (+0.040 to +0.048) | <0.0001 |

eTable 2. Adjusted short-term mortality among ICU admissions with metastatic cancer, stratified by cancer type

| Cancer type | Adjusted short-term mortality (95% CI) ^a | |
|-----------------------------------|-----------------------------------------------------|--|
| Lung | 30.2 (29.9-30.5) | |
| Breast | 29.1 (28.5-29.6) | |
| Genitourinary | 27.9 (27.5-28.3) | |
| Colon | 25.5 (25.1-25.9) | |
| Other cancer or >1 cancer subtype | 27.2 (27.0-27.4) | |
| No identified type | 31.9 (30.6-33.4) | |

^a Adjusted short-term mortality is expressed as percent

eTable 3. Adjusted short-term mortality among mechanically ventilated ICU admissions with metastatic cancer, stratified by cancer type

| Cancer type | Adjusted short-term mortality (95% CI) ^a |
|-----------------------------------|-----------------------------------------------------|
| Lung | 62.8 (62.1-63.5) |
| Breast | 65.6 (64.4-66.9) |
| Genitourinary | 63.4 (62.2-64.5) |
| Colon | 62.9 (61.8-64.0) |
| Other cancer or >1 cancer subtype | 61.6 (61.0-62.1) |
| No identified type | 63.1 (60.8-65.5) |

^a Adjusted short-term mortality is expressed as percent
